Dystonie neurofonctionnelle

Trouble de la marche neurofonctionnel

Mouvement anormaux neurofonctionnel paroxystiques

Contextual features?	?
Abnormal interictal examination with typical functional signs (e.g. Hoover sign, fixed dystonic postures)?	+++?
Occurrence of non-neurological functional symptoms?	++?
Onset in adulthood?	+?
No family history of FPM?	+?
Characteristic of the paroxysmal movements?	?
Paroxysmal tremor?	+++?
Unresponsiveness during attacks?	+++?
Functional motor pattern (e.g. opisthotonos, undulating motor activity, rhythmical pelvic movements, side-to-side head shaking, isolated lower facial involvement)?	+++?
Distractibility/Entrainment?	++?
Combination of various abnormal movements during a single episode?	++?
Movement incongruent with known disorders?	++?
Vocalizations, “huffing-and-puffing” during episodes?	++?

Course of the attacks?	?
Waxing and waning pattern during a single episode?	+++?
High variability of episodes phenomenology and duration?	++?
Long duration (hours to days)?	++?
Atypical trigger (loud noise, startle, examination)?	+?
Response to treatment?	?
Induction or suppression by suggestion or placebo procedure?	+++?
Absent or atypical response to effective drugs used in FPM?	+?
